

June 2020 ACFE Resources

Cyber Security Foundations

Topic summary:

What would you do if you suddenly could not access your customer's data? Cyber criminals do not play by the rules. While you are working at building a winning business, criminals from around the world are scheming to steal your data. Cyber-attacks are constantly evolving and getting more sophisticated, so today's companies need a dynamic and robust defense. The recent move to remote work has also brought a new set of risks and challenges that companies need to address. In this presentation Dominic and Christian discuss some of the current trends in cyber-attacks they are seeing at this time and introduce the concept of cyber security foundations.

Please reach out to Dominic or Christian directly anytime for addition information at www.cyber.sc
