May 2020 ACFE Resources

Introduction to Digital Forensics Software

Topic summary:

The proliferation of technology provides vast opportunities for fraudsters so fraud investigators need to be aware of the rapidly evolving technology landscape and possess a comprehensive understanding of emerging investigative tools and techniques. This session provides 8 hours of online digital forensics training using Autopsy. This digital forensic software which is a Windows-based desktop digital forensics tool that is free, open source, and has all of the features that you'd normally find in commercial digital forensics tools. It is extensible and comes with features that include keyword search, hash matching, registry analysis, web analytics, and more.

In light of the COVID-19 crisis, Basis Technology is offering free online Autopsy training to everyone. This offer ends June 1, 2020. Please use the following link to register.

There will also be a follow up digital forensics investigations best practices course using Autopsy being offered in July and August online through the ACFE Vancouver Chapter for anyone interested.

Please contact us directly if you have any questions or require additional information.

Sincerely,

Steve Wilson
